# Collect Employee Questionnaire Data from Anywhere

- **Customize Survey / Access Questions** - Create unlimited sets of survey questions to be used to capture business specific information.

- **Specific Questions to Different Entrances** - Deploy different surveys to different workplace access points for different security needs.

- **Deny Access Based on Responses** - Deny access if survey responses fall outside the desired parameters due to illness, expired certifications, etc.

- **Securely Manage Sensitive Information** - All survey responses are securely stored on the XPressEntry server limiting access to sensitive info.

- **Collect Data from Compatible Devices** – Available Bluetooth forehead temperature sensors and finger VO2 meters readers link to worker record.

## How It Works

Safety and security professionals begin by scanning an employee's badge to verify their identity. Then the screen displays the custom survey questions designated for the specific secure entry point and can also capture health measurements from optional Bluetooth compatible health measurement devices. Survey responses and measurements from personnel and visitors are recorded directly into XPressEntry and securely stored on the encrypted database. In accordance with regulatory requirements, visibility of personal information and health data can be limited to those with appropriate authority. In addition, sensitive information can be set to automatically be purged after a set amount of time.
